INDEX TO AUTHORS

A

Akazawa, T., and **Conn, Eric E.** The oxidation of reduced pyridine nucleotides by peroxidase, 403

Alexander, George J., Gold, Allen M., and **Schwenk, Erwin.** Biogenesis of yeast sterols. III. The origin of carbon 28 of ergosterol, 599

— and **Schwenk, Erwin.** Biogenesis of yeast sterols. IV. Transmethylation in ergosterol synthesis, 611

Anker, H. S. See *Catravas and Anker*, 669

Armstrong, Marvin D., Shaw, Kenneth N. F., Gortatowski, Melvin J., and **Singer, Herbert.** The indole acids of human urine. Paper chromatography of indole acids, 17

Ashley, J. J., Brown, B. T., Okita, G. T., and **Wright, S. E.** The metabolites of cardiac glycosides in human urine, 315

Ashwell, Gilbert. See *Hickman and Ashwell*, 737

Axelrod, Bernard. See *Haining and Axelrod*, 193

Axelrod, Julius, Inscoe, Joseph K., and **Tomkins, Gordon M.** Enzymatic synthesis of *N*-glucosyluronic acid conjugates, 835

Azari, Parviz R., and **Feeney, Robert E.** Resistance of metal complexes of conalbumin and transferrin to proteolysis and to thermal denaturation, 293

B

Baer, Erich, and **Buchnea, Dmytro.** Synthesis of saturated and unsaturated phosphatidyl glycerols. III. Cardiolipin substitutes, 895

Barford, R. A. See *Luddy, Barford, Riemenschneider, and Evans*, 843

Beck, William S. Occurrence and control of the phosphogluconate oxidation pathway in normal and leukemic leukocytes, 271

Beck, William S. The control of leukocyte glycolysis, 251

— and **Ochoa, Severo.** Metabolism of propionic acid in animal tissues. IV. Further studies on the enzymatic isomerization of methylmalonyl coenzyme A, 931

Bevenue, Arthur. See *Loewus and Jang*, 521

Black, Arthur L., and **Kleiber, Max.** The transfer of carbon from propionate to amino acids in intact cows, 203

Bodansky, Oscar. Assay of tissue phosphoglucomutase activity, 859

Brown, B. T. See *Ashley, Brown, Okita, and Wright*, 315

Brown, Rose H. See *Lynn and Brown*, 1005, 1015

—. See *Lynn, Brown, and Mullins*, 995

Buchanan, John M. See *Rieder and Buchanan*, 951, 959

Buchnea, Dmytro. See *Baer and Buchnea*, 895

Buell, Mary V., Lowry, Oliver H., Roberts, Nira R., Chang, Mei-Ling Wu, and **Kapphahn, Joyce I.** The quantitative histochemistry of the brain. V. Enzymes of glucose metabolism, 979

Burns, J. J., Kanfer, Julian, and **Dayton, Peter G.** Metabolism of L-ascorbic acid in rat kidney, 107

C

Carter, Herbert E., Smith, Donald B., and **Jones, D. N.** A new ethanolamine-containing lipide from egg yolk, 681

Cate, Deborah L. See *Coniglio and Cate*, 361

Catravas, G. N., and **Anker, H. S.** On the restoration of fatty acid biosynthesis after fasting, 669

XUM

Chaikoff, I. L. See *Tong and Chaikoff*, 939
Chang, Mei-Ling Wu. See *Buell, Lowry, Roberts, Chang, and Kapphahn*, 979
Chargaff, Erwin. See *Rosenberg and Chargaff*, 1031
Claridge, C. A. See *MacLeod, Claridge, Hori, and Murray*, 829
Comb, Donald G., and **Roseman, Saul.** Glucosamine metabolism. IV. Glucosamine-6-phosphate deaminase, 807
Coniglio, John G., and **Cate, Deborah L.** The distribution and biosynthesis of palmitic and stearic acids in liver, intestine, and carcass of intact normal and fasted rats, 361
Conn, Eric E. See *Akazawa and Conn*, 403
Cooperstein, S. J., and **Lazarow, Arnold.** Alloxan inactivation of coenzyme A and the pigeon liver acetylating enzyme, 695

D

Dayton, Peter G. See *Burns, Kanfer, and Dayton*, 107
De Giovanni, Rosalie. See *Zamenhof, Rich, and De Giovanni*, 651
Doctor, V. M. Studies on the inhibitory nature of pteridines, 617
Duda, George D., and **Handler, Philip.** Kinetics of ammonia metabolism *in vitro*, 303
Dutcher, James D. Aspergillic acid: an antibiotic substance produced by *Aspergillus flavus*. III. The structure of hydroxyaspergillic acid, 785

E

Eik-Nes, Kristen. See *Oertel and Eik-Nes*, 543
Evans, E. A., Jr. See *Goldfine, Koppelman, and Evans*, 577
Evans, John D. See *Luddy, Barford, Riemenschneider, and Evans*, 843

F

Feeney, Robert E. See *Azari and Feeney*, 293
Field, Henry, Jr. See *Swell, Trout, Hopper, Field, and Treadwell*, 1
Fischer, Edmond H. See *Kent, Krebs, and Fischer*, 549
—. See *Stein and Fischer*, 867
Fish, William A. See *Stokes, Hickey, and Fish*, 347
Fishman, William H. See *Wotiz, Sie, and Fishman*, 723
— and **Lipkind, J. B.** Comparative ability of some steroids and their esters to enhance the renal β-glucuronidase activity of mice, 729
Frisell, Wilhelm R. See *Mackenzie and Frisell*, 417

G

Ganguli, N. C. Enzymatic formation of uridine diphosphate glucose with preparations from *Impatiens holstii*, 337
Ginsburg, V. Purification of uridine-diphosphate glucose pyrophosphorylase from mung bean seedlings, 55
Glaser, Luis. The synthesis of cellulose in cell-free extracts of *Acetobacter xylinum*, 627
Gold, Allen M. See *Alexander, Gold, and Schwenk*, 599
Goldfine, Howard, Koppelman, Ray, and **Evans, E. A., Jr.** Nucleoside incorporation into HeLa cells infected with poliomyelitis virus, 577
Gortatowski, Melvin J. See *Armstrong, Shaw, Gortatowski, and Singer*, 17
Gould, Bernard S. Biosynthesis of collagen. III. The direct action of ascorbic acid on hydroxyproline and collagen formation in subcutaneous polyvinyl sponge implants in guinea pigs, 651
Granick, S. Porphyrin biosynthesis in erythrocytes. I. Formation of δ-aminolevulinic acid in erythrocytes, 1101
—. See *Mauzerall and Granick*, 1141
— and **Mauzerall, D.** Porphyrin biosynthesis in erythrocytes. II. Enzymes converting δ-aminolevulinic acid to coproporphyrinogen, 1119

Green, Lonzo. See *Neufeld, Green, Latterell, and Weintraub,* 1093

H

Haining, Joseph L., and **Axelrod, Bernard.** Induction period in the lipoxidase-catalyzed oxidation of linoleic acid and its abolition by substrate peroxide, 193

Handler, Philip. See *Duda and Handler,* 303

—. See *Klingman and Handler,* 369

Hash, John H., and **King, Kendall W.** On the nature of β-glucosidases of *Myrothecium verrucaria,* 381

— and —. Some properties of an aryl-β-glucosidase from culture filtrates of *Myrothecium verrucaria,* 395

Hickey, Frederick C. See *Stokes, Hickey, and Fish,* 347

Hickman, Jean, and **Ashwell, Gilbert.** Purification and properties of D-xylulokinase in liver, 737

Hillman, R. S. Lyle. See *Jacobs and Hillman,* 445

Hoberman, Henry D. Coupling of oxidation of substrates to reductive biosyntheses. I. Evidence of substrate specificity in the reductive synthesis of triose phosphate, 9

Hoch, Frederic L. See *Williams, Hoch, and Vallee,* 465

—, **Williams, Robert J. P.,** and **Vallee, Bert L.** The role of zinc in alcohol dehydrogenases. II. The kinetics of the instantaneous reversible inhibition of yeast alcohol dehydrogenase by 1,10-phenanthroline, 453

Hopper, J. R. See *Swell, Trout, Hopper, Field, and Treadwell,* 1

Hori, Aiko. See *MacLeod, Claridge, Hori, and Murray,* 829

Hundley, James M. See *Mehler, McDaniel, and Hundley,* 323, 331

XUM

INDEX TO SUBJECTS

A

Acetobacter xylinum: Extracts, cell-free, cellulose, synthesis, *Glaser*, 627

Acetylating enzyme: Liver, pigeon, inactivation, alloxan, *Cooperstein and Lazarow*, 695

Adenine nucleotide(s): Interconversions, net, factors, effect, *Pressman*, 967

Adenine ribonucleotide: Cyclic, formation, tissue, *Rall and Sutherland*, 1065

—, fractionation and characterization, formation, tissue, *Sutherland and Rall*, 1077

Adenosylethionine: *S*-, and ethionine, inhibition, *Parks*, 169

Aerobacter aerogenes: L-Arabinose, degradation, *Wolin, Simpson, and Wood*, 559

Alcohol dehydrogenase(s): Zinc, role, *Hoch, Williams, and Vallee*, 453
Williams, Hoch, and Vallee, 465

Aldehyde: Oxidation, *Jakoby*, 75, 89

Alloxan: Coenzyme A and acetylating enzyme, liver, pigeon, inactivation, *Cooperstein and Lazarow*, 695

Amine: Hexos-. *See* Hexosamine

Amino acid(s): Cows, intact, carbon, propionate, transfer, *Black and Kleiber*, 203

Amino acid analogue: Inhibitory, and *S*-carbamyl-L-cysteine, *Ravel, McCord, Skinner, and Shive*, 159

Aminolevulinic acid: δ-, coproporphyrinogen, conversion, enzyme, *Granick and Mauzerall*, 1119

δ-, erythrocytes, formation, *Granick*, 1101

Ammonia: Metabolism, *in vivo*, kinetics, *Duda and Handler*, 303

Amphenone B: Microsomes, testicular, properties, enzymatic, effects, *Lynn and Brown*, 1005

Amylase(s): α-, proteolytic attack, resistance, *Stein and Fischer*, 867

Androgen(s): Progesterone, conversion, testes, *Lynn and Brown*, 1015

Androsterone: Dehydroepi-. *See* Dehydroepiandrosterone

Arabinose: L-, *Aerobacter aerogenes*, degradation, *Wolin, Simpson, and Wood*, 559

Aryl-β-glucosidase: Filtrates, culture, *Myrothecium verrucaria*, properties, *Hash and King*, 395

Ascorbic acid: Implants, polyvinyl sponge, subcutaneous, formation, hydroxyproline and collagen, action, *Gould*, 637

L-, D-galacturonic acid, and, formation, comparative study, *Loewus, Jang, and Seegmiller*, 533

—, kidney, metabolism, *Burns, Kanfer, and Dayton*, 107

Ascorbic acid: L-, strawberries, sugars, carbon 14-labeled, conversion, *Loewus and Jang*, 505, 521
Loewus, Jang, and Seegmiller, 533

Aspergillic acid: *Aspergillus flavus*, antibiotic substance, *Dutcher*, 785

Hydroxy-. *See* Hydroxyaspergillic acid

Aspergillus flavus: Aspergillic acid, antibiotic substance, *Dutcher*, 785

Atheroma(s): Lipides, component, composition, fatty acid, *Luddy, Barford, Riemenschneider, and Evans*, 843

B

Bacteria: *See Acetobacter, Aerobacter*, etc.

Bacterium: Marine, metabolism, sodium, function, *MacLeod, Claridge, Hori, and Murray*, 829

Bean: Mung. *See* Mung bean

Bipyridine: 2,2′-, respiration, mitochondrial, inhibition, and phosphorylation, oxidative, relationship, *Yang, Yanasugondha, and Webb*, 659

Brain: Histochemistry, quantitative, *Buell, Lowry, Roberts, Chang, and Kapphahn*, 979
Ox, mucolipide, study, *Rosenberg and Chargaff*, 1031

C

Carbamyl-L-cysteine: *S*-, and amino acid analogue, inhibitory, *Ravel, McCord, Skinner, and Shive*, 159
Carbon: Propionate, amino acids, intact cows, transfer, *Black and Kleiber*, 203
Carbon chain: Origin, *Rieder and Buchanan*, 951
Carbon tetrachloride: Mitochondrial swelling, osmotic, cause, *Recknagel and Malamed*, 705
Carbon 28: Ergosterol, origin, *Alexander, Gold, and Schwenk*, 599
Carboxylase: De-. *See* Decarboxylase
Picolinic. *See* Picolinic carboxylase
Carcass: Rats, normal and fasted, palmitic and stearic acids, distribution, *Coniglio and Cate*, 361
Cardiac glycoside(s): *See also* Heart
Cardiolipin: Substitutes, *Baer and Buchnea*, 895
Catabolism: Hemoglobin, *Mills and Randall*, 589
Cell: Malignant, human, strain HeLa, glutaminase, *Williams and Manson*, 229
Cellulose: *Acetobacter xylinum*, extracts, cell-free, synthesis, *Glaser*, 627
Cholesterol: Absorption, mechanism, *Swell, Trout, Hopper, Field, and Treadwell*, 1
Desmosterol, skin, occurrence, *in vivo*, *Stokes, Hickey, and Fish*, 347
Cholesterol-4-C^{14}: Dilution, endogenous, and esterification, *Swell, Trout, Hopper, Field, and Treadwell*, 1
Coenzyme A: Inactivation, alloxan, *Cooperstein and Lazarow*, 695
Methylmalonyl, isomerization, enzymatic, *Beck and Ochoa*, 931
Collagen: Biosynthesis, *Gould*, 637
Formation, implants, polyvinyl, sponge, subcutaneous, ascorbic acid, action, *Gould*, 637
Hydroxylysine formation, hydroxylation lysine, course, *Van Slyke and Sinex*, 797
Conalbumin: Proteolysis, denaturation, thermal, and, metal complexes, resistance, *Azari and Feeney*, 293
Conarachin II: Sodium oleate, interaction, *Kinnear, Kelly, and Naismith*, 67
Coproporphyrinogen: δ-Aminolevulinic acid, conversion, enzyme, *Granick and Mauzerall*, 1119
Cysteine: *S*-Carbamyl-L-. *See* Carbamyl-L-cysteine

D

Deaminase: Glucosamine-6-phosphate, *Comb and Roseman*, 807
Decarboxylase: Uroporphyrinogen, and, *Mauzerall and Granick*, 1141
Dehydrocholesterol: 24-. *See* Desmosterol
Dehydroepiandrosterone: Plasma, human blood, determination, *Oertel and Eik-Nes*, 543
Dehydrogenase: *Pseudomonas fluorescens, Jakoby*, 75
Deoxypyridoxine: Methionine isomer, absorption, intestinal, effect, *Jacobs and Hillman*, 445
Deoxyribonucleic acid(s): *Escherichia coli*, pyrimidine, introduction, study, *Zamenhof, Rich, and De Giovanni*, 651
Deoxyribosyl compound(s): Tissues, animal, *Rotherham and Schneider*, 853
Desmosterol: Skin, occurrence, and cholesterol, conversion, *in vivo*, *Stokes, Hickey, and Fish*, 347
Diabetes: Picolinic carboxylase, increase, *Mehler, McDaniel, and Hundley*, 323
See also Insulin
Dimethylglycine: Metabolism, mitochondria, liver, *Mackenzie and Frisell*, 417

E

Egg: Yolk, lipide, ethanolamine, presence, *Carter, Smith, and Jones*, 681

Enzyme(s): Amino acid-activating, uterus, estradiol, effect, *McCorquodale and Mueller*, 31
Glucose, metabolism, *Buell, Lowry, Roberts, Chang, and Kapphahn*, 979
Pancreatic, I^{131}-thyroprotein, hydrolysis, *Tong and Chaikoff*, 939
Sulfhydryl-oxidizing, thiooxidase, *Neufeld, Green, Latterell, and Weintraub*, 1093
See Amylase, Carboxylase, etc.

Enzyme A: Co-. *See* Coenzyme A

Epimerase: L-Ribulose-5-phosphate 4-. *See* Ribulose-5-phosphate 4-epimerase

Ergosterol: Carbon-28, origin, *Alexander, Gold, and Schwenk*, 599
Synthesis, transmethylation, *Alexander and Schwenk*, 611

Erythrocyte(s): δ-Aminolevulinic acid, formation, *Granick*, 1101
Intact, hemoglobin, breakdown, oxidative, protection, *Mills and Randall*, 589
Porphyrin, biosynthesis, *Granick*, 1101
Granick and Mauzerall, 1119
Mauzerall and Granick, 1141
See also Hemoglobin; Leukocyte; Plasma

Escherichia coli: Deoxyribonucleic acids, pyrimidine, introduction, study, *Zamenhof, Rich, and De Giovanni*, 651

Estradiol: Enzymes, amino acid-activating, uterus, effect, *McCorquodale and Mueller*, 31

Ethanolamine: Lipide, egg yolk, presence, *Carter, Smith, and Jones*, 681

Ethionine: *S*-Adenosyl-. *See* Adenosylethionine
S-Adenosylethionine, and, inhibition, *Parks*, 169

F

Fasting: Fatty acid biosynthesis, restoration, effect, *Catravas and Anker*, 669

Fat: Acetone-soluble, *Mycobacterium tuberculosis* (Brevannes), constituents, chemistry, *Noll*, 919
Noll and Jackim, 903

Fatty acid: Biosynthesis, restoration, after fasting, *Catravas and Anker*, 669
Lipides, component, plasma and atheromas, composition, *Luddy, Barford, Riemenschneider, and Evans*, 843

G

Galacturonic acid: D-, L-ascorbic acid, and, formation, comparative study, *Loewus, Jang, and Seegmiller*, 533

Glucomutase activity: Phospho-. *See* Phosphoglucomutase activity

Gluconate: Phospho-. *See* Phosphogluconate

Glucosamine: Formation, *in vivo*, biological, *Rieder and Buchanan*, 951, 959

Glucosamine-6-phosphate: Deaminase, *Comb and Roseman*, 807

Glucose: Enzymes, metabolism, *Buell, Lowry, Roberts, Chang, and Kapphahn*, 979
Uridine diphosphate. *See* Uridine diphosphate glucose
Utilization, rats, normal, insulin, effects, *Levin and Weinhouse*, 749

Glucosidase: Aryl-β-. *See* Aryl-β-glucosidase
β-, *Myrothecium verrucaria*, nature, *Hash and King*, 381

Glucosyluronic acid: *N*-, conjugates, synthesis, enzymatic, *Axelrod, Inscoe, and Tomkins*, 835

Glucuronidase: β-, renal, steroids and esters, enhancement, ability, *Fishman and Lipkind*, 729

Glutaminase: Cell, malignant, human, strain HeLa, glutaminase, *Williams and Manson*, 229

Glutaminase—*continued:*
Renal, purification and properties, *Klingman and Handler*, 369
Glyceride(s): Phosphoglycolipides, and, *Noll and Jackim*, 903
Glycine: Dimethyl-. *See* Dimethylglycine
Glycogen(s): Isolation, acid and alkaline procedures, comparison, *Stetten, Katzen, and Stetten*, 475
Phosphorylase reaction, molecular size, influence, *Stetten and Stetten*, 489
Glycoprotein(s): Synovial fluid, normal bovine, hexosamine, presence, *Neuhaus and Letzring*, 177
Glycoside(s): Cardiac, urine, human, metabolites, presence, *Ashley, Brown, Okita, and Wright*, 315

H

HeLa: Strain, malignant cell, human, glutaminase, *Williams and Manson*, 229
HeLa cell(s): Poliomyelitis virus, infected, incorporation, nucleoside, *Goldfine, Koppelman, and Evans*, 577
Hemoglobin: Breakdown, oxidative, erythrocyte, intact, protection, *Mills and Randall*, 589
See also Erythrocyte; Leukocyte; Plasma
Hexosamine: Glycoproteins, synovial fluid, bovine, normal, presence, *Neuhaus and Letzring*, 177
Histochemistry: Quantitative, brain, *Buell, Lowry, Roberts, Chang, and Kapphahn*, 979
Hormone(s): Picolinic acid, tryptophan peroxidase, and, influence, *Mehler, McDaniel, and Hundley*, 331
Hydrogenase: Alcohol de-. *See* Alcohol dehydrogenase
De-. *See* Dehydrogenase
Hydroxyaspergillic acid: Structure, *Dutcher*, 785
Hydroxylysine: Formation, collagen, hydroxylation lysine, course, *Van Slyke and Sinex*, 797
Hydroxyproline: Formation, implants, polyvinyl sponge, subcutaneous, ascorbic acid, action, *Gould*, 637

I

Impatiens holstii: Uridine diphosphate glucose, formation, enzymatic, with, *Ganguli*, 337
Indole acid(s): Urine, human, chromatography, *Armstrong, Shaw, Gortatowski, and Singer*, 17
Insulin: Glucose utilization, rats, normal, effects, *Levin and Weinhouse*, 749
See also Diabetes
Intestine: Rats, normal and fasted, palmitic and stearic acids, distribution, *Coniglio and Cate*, 361

K

Kidney: L-Ascorbic acid, metabolism, *Burns, Kanfer, and Dayton*, 107
See also Diabetes
Kinase: D-Xylulo-. *See* Xylulokinase

L

Leukocyte(s): Normal and leukemic, phosphogluconate pathway, oxidation, occurrence, *Beck*, 271
Leukocyte cell. *See also* Erythrocyte
Leukocyte glycolysis: Control, *Beck*, 251
Levulinic acid: δ-Amino-. *See* Aminolevulinic acid
Linoleic acid: Oxidation, lipoxidase-catalyzed, induction period, and abolition, *Haining and Axelrod*, 193
Lipide(s): Component, plasma and atheromas, composition, fatty acid, *Luddy, Barford, Riemenschneider, and Evans*, 843
Egg yolk, ethanolamine, presence, *Carter, Smith, and Jones*, 681
Muco-. *See* Mucolipide
Lipoic acid: Protein-bound, nature and reactions, studies, *Reed, Koike, Levitch, and Leach*, 143
System, activating, studies, *Reed, Leach, and Koike*, 123

Liver: Composition, enzymatic, changes, *Mehler, McDaniel, and Hundley,* 323, 331
Mitochondria, metabolism, dimethylglycine, use, *Mackenzie and Frisell,* 417
Pyridoxamine and pyridoxal phosphates, oxidation, enzymatic, *Pogell,* 761
Rats, normal and fasted, palmitic and stearic acids, distribution, *Coniglio and Cate,* 361
D-Xylulokinase, purification and properties, *Hickman and Ashwell,* 737
Lysine: Hydroxy-. *See* Hydroxylysine
Hydroxylation, collagen, hydroxylysine formation, course, *Van Slyke and Sinex,* 797

M

Metabolism: Ammonia, *in vivo*, kinetics, *Duda and Handler,* 303
Ascorbic acid, kidney, *Burns, Kanfer, and Dayton,* 107
Dimethylglycine, mitochondria, liver, *Mackenzie and Frisell,* 417
Steroid, studies, *Wotiz, Sie, and Fishman,* 723
Sterol, *Stokes, Hickey, and Fish,* 347
Metal complex(es): Conalbumin, transferrin, and, proteolysis and denaturation, thermal, resistance, *Azari and Feeney,* 293
Methionine isomer(s): Absorption, intestinal, deoxypyridoxine, effect, *Jacobs and Hillman,* 445
Microsome(s): Testicular, properties, catalytic and adsorptive, *Lynn, Brown, and Mullins,* 995
—, —, enzymatic, Amphenone B, effects, *Lynn and Brown,* 1005
Milk: Human, phosphatase content, *Stwart, Paltou, and Kelly,* 777
Mitochondrial swelling: Osmotic, carbon tetrachloride and inorganic phosphate, cause, *Rechnagel and Malamed,* 705
Mitochondrion: Liver, metabolism, dimethylglycine, use, *Mackenzie and Frisell,* 417
Mucolipide: Brain, ox, study, *Rosenberg and Chargaff,* 1031
Mung bean: Uridinediphosphate glucose pyrophosphorylase, purification, *Ginsburg,* 55
Mycobacterium tuberculosis: Fat, acetone-soluble, constituents, chemistry, *Noll,* 919
Noll and Jackim, 903
Myrothecium verrucaria: Filtrates, culture, aryl-β-glucosidase, properties, *Hash and King,* 395
β-Glucosidases, nature, *Hash and King,* 381

N

Naphthoquinone: Derivative, crystalline, vitamin K_2, isolation and properties, *Noll,* 919
Nitrogen atom: Origin, *Rieder and Buchanan,* 959
Nucleic acid: Deoxyribo-. *See* Deoxyribonucleic acid
Nucleoside: HeLa cells, poliomyelitis virus, infected, incorporation, *Goldfine, Koppelman, and Evans,* 577
Nucleotide(s): Adenine. *See* Adenine nucleotide
Adenine ribo-. *See* Adenine ribonucleotide
Oligoribo-. *See* Oligoribonucleotide
Pyridine. *See* Pyridine nucleotide

O

Oleate: Sodium. *See* Sodium oleate
Oligoribonucleotide(s): Phosphorolysis, polynucleotide, use, *Singer,* 211
Ovary: Human, steroids, *Zander,* 117
See also Uterus
Oxidase: Thio-. *See* Thiooxidase
Oxidation: Aldehyde, *Jakoby,* 75, 89
Phosphogluconate pathway, leukocytes, normal and leukemic, occurrence, *Beck,* 271
Pyridine nucleotides, reduced, *Akazawa and Conn,* 403

P

Palmitic acid: Liver, intestine, carcass, rats, normal and fasted, distribution, *Coniglio and Cate*, 361
Pentose-1-C^{14}: Strawberries, administered, labeling patterns, *Loewus and Jang*, 521
Peptide: Strepogenin-active, and peptides, related, competitive inhibition, *Merrifield*, 43
Peroxidase: Pyridine nucleotides, reduced, use, *Akazawa and Conn*, 403
Tryptophan. *See* Tryptophan peroxidase
Phenanthroline: 1,10-, respiration, mitochondrial, inhibition, and phosphorylation, oxidative, relationship, *Yang, Yanasugondha, and Webb*, 659
—, yeast alcohol dehydrogenase, inhibition, time-dependent, kinetics, *Williams, Hoch, and Vallee*, 465
—, — — —, inhibition, instantaneous, kinetics, *Hoch, Williams, and Vallee*, 453
Phenol: Poly-. *See* Polyphenol
Phosphatase: Pyro-. *See* Pyrophosphatase
Phosphatase content: Alkaline, milk, human, *Stewart, Paltou, and Kelly*, 777
Phosphate: Inorganic, mitochondrial swelling, osmotic, cause, *Recknagel and Malamed*, 705
Pyridoxal. *See* Pyridoxal phosphate
Pyridoxamine. *See* Pyridoxamine phosphate
Uridinedi-. *See* Uridinediphosphate
Phosphatidyl glycerol(s): Saturated and unsaturated, synthesis, *Baer and Buchnea*, 895
Phosphoglucomutase activity: Tissue, assay, *Bodansky*, 859
Phosphogluconate oxidation: Pathway, leukocytes, normal and leukemic, occurrence, *Beck*, 271
Phosphoglycolipide(s): Glycerides, and, *Noll and Jackim*, 903
Phosphorolysis: Oligoribonucleotides, phosphorylase, polynucleotide, use, *Singer*, 211
Phosphorylase: Polynucleotide, phosphorolysis, oligoribonucleotide, use, *Singer*, 211
Potato, polyphenols and potato components, influence, *Schwimmer*, 715
Trans-. *See* Transphosphorylase
Uridinediphosphate glucose pyro-. *See* Uridinediphosphate glucose pyrophosphate
Phosphorylase b: Properties, crystalline, *Kent, Krebs, and Fischer*, 549
Phosphorylation: Oxidative, respiration, mitochondrial, inhibition, relation, *Yang, Yanasugondha, and Webb*, 659
Picolinic carboxylase: Diabetes, increase, *Mehler, McDaniel, and Hundley*, 323
Hormones, influence, *Mehler, McDaniel, and Hundley*, 331
Piricularia oryzae: *Polyporus versicolor*, and, enzyme, sulfhydryl-oxidizing, thiooxidase, *Neufeld, Green, Latterell, and Weintraub*, 1093
Plasma: Human, lipides, component, composition, fatty acid, *Luddy, Barford, Riemenschneider, and Evans*, 843
See also Erythrocyte: Hemoglobin; Leukocyte
Plasmin: Action, substrates, synthetic, rate, measurement, *Roberts*, 285
Poliomyelitis virus: HeLa cells, infected, incorporation, nucleoside, *Goldfine, Koppelman, and Evans*, 577
Polyphenol(s): Phosphorylase, potato, influence, *Schwimmer*, 715
Polyporus versicolor: *Piricularia oryzae*, and, enzyme, sulfhydryl-oxidizing, thiooxidase, *Neufeld, Green, Latterell, and Weintraub*, 1093
Porphyrin: Erythrocytes, biosynthesis, *Granick*, 1101
Granick and Mauzerall, 1119
Mauzerall and Granick, 1141
Porphyrinogen: Copro-. *See* Coproporphyrinogen

Porphyrinogen—*continued:*
Uro-. *See* Uroporphyrinogen
Potato component(s): Phosphorylase, potato, influence, *Schwimmer*, 715
Progesterone: Androgens, conversion, testes, *Lynn and Brown*, 1015
Proline: Hydroxy-. *See* Hydroxyproline
Propionate: Carbon, amino acids, intact cows, transfer, *Black and Kleiber*, 203
Propionic acid: Tissue, animal, metabolism, *Beck and Ochoa*, 931
Protein: Glyco-. *See* Glycoprotein
I^{131}-Thyro-. *See* Thyroprotein
Proteus vulgaris: Diphosphopyridine nucleotide pyrophosphatase, heat-inactivated, *Swartz, Kaplan, and Lamborg*, 1051
Pseudomonas fluorescens: Dehydrogenase, *Jakoby*, 75
Pteridine(s): Nature, inhibitory, studies, *Doctor*, 617
Purine antagonist(s): Determination, colorimetric method, *Loo and Michael*, 99
Pyridine: 2,2′-Bi. *See* Bipyridine
Pyridine nucleotide(s): Reduced, peroxidase, use, *Akazawa and Conn*, 403
Pyridoxal phosphate: Pyridoxamine phosphate, liver, oxidation, enzymatic, *Pogell*, 761
Pyridoxamine phosphate: Pyridoxal phosphate, liver, oxidation, enzymatic, *Pogell*, 761
Pyridoxine: Deoxy-. *See* Deoxypyridoxine
Pyrimidine(s): Deoxyribonucleic acids, *Escherichia coli*, introduction, study, *Zamenhof, Rich, and De Giovanni*, 651
Pyrophosphatase: Diphosphopyridine nucleotide, heat-inactivated, *Proteus vulgaris, Swartz, Kaplan, and Lamborg*, 1051

R

Ribulose-5-phosphate 4-epimerase: L-, identification and properties, *Wolin, Simpson, and Wood*, 559

S

Skin: Desmosterol, occurrence, and cholesterol, conversion, *in vivo*, *Stokes, Hickey, and Fish*, 347
Sodium: Marine bacterium, metabolism, function, *MacLeod, Claridge, Hori, and Murray*, 829
Sodium oleate: Conarachin II, interaction, *Kinnear, Kelly, and Naismith*, 67
Sphingomyelin: Preparation, simplified, *Rapport and Lerner*, 63
Stearic acid: Liver, intestine, carcass, rats, normal and fasted, distribution, *Coniglio and Cate*, 361
Steroid(s): Esters, and, β-glucuronidase, renal, enhancement, ability, *Fishman and Lipkind*, 729
Ovary, human, *Zander*, 117
Sterol(s): Yeast, biogenesis, *Alexander, Gold, and Schwenk*, 599
Alexander and Schwenk, 611
Strawberry: L-Ascorbic acid, sugars, carbon 14-labeled, conversion, *Loewus and Jang*, 505, 521
Loewus, Jang, and Seegmiller, 533
Pentose-1-C^{14}, administered, labeling patterns, *Loewus and Jang*, 521
Strepogenin: Activity, peptide, and peptides, related, competitive inhibition, *Merrifield*, 43
Substrate(s): Oxidation, biosyntheses, reductive, coupling, *Hoberman*, 9
Sugar(s): Carbon 14-labeled, L-ascorbic acid, strawberries, conversion, *Loewus and Jang*, 505, 521
Loewus, Jang, and Seegmiller, 533
Free, labeling patterns, *Loewus and Jang*, 505
Sulfhydryl group(s): Dehydrogenases, juxtaposed, *Jakoby*, 89
Synovial fluid: Bovine, glycoproteins, hexosamine, presence, *Neuhaus and Letzring*, 177

T

Testis: Progesterone, androgens, conversion, *Lynn and Brown*, 1015

Thiooxidase: Enzyme, sulfhydryl-oxidizing, *Piricularia oryzae* and *Polyporus versicolor*, *Neufeld, Green, Latterell, and Weintraub*, 1093
Thyroprotein: Iodine 131, enzymes, pancreatic, hydrolysis, *Tong and Chaikoff*, 939
Tissue(s): Animal, compounds, deoxyribosyl, *Rotherham and Schneider*, 853
—, metabolism, *Beck and Ochoa*, 931
Phosphoglucomutase activity, assay, *Bodansky*, 859
Transferrin: Proteolysis, denaturation, thermal, and metal complexes, resistance, *Azari and Feeney*, 293
Transmethylation: Ergosterol, synthesis, *Alexander and Schwenk*, 611
Transphosphorylase: Adenosine triphosphate-adenosine monophosphate, *Noda*, 237
Triose phosphate: Synthesis, reductive, substrate specificity, evidence, *Hoberman*, 9
Tryptophan peroxidase: Hormones, influence, *Mehler, McDaniel, and Hundley*, 331

U

Uracil derivative(s): Acetylated, labile, *Spector and Keller*, 185
Uridine diphosphate: Galactose pyrophosphorylase, mammalian, *Isselbacher*, 429
Uridine diphosphate glucose: Formation, enzymatic, with *Impatiens holstii*, *Ganguli*, 337
Uridinediphosphate glucose pyrophosphorylase: Mung bean seedlings, purification, *Ginsburg*, 55
Urine: Human, glycosides, cardiac, metabolites, presence, *Ashley, Brown, Okita, and Wright*, 315
—, indole acids, *Armstrong, Shaw, Gortatowski, and Singer*, 17
Uronic acid: *N*-Glucosyl-. *See* Glucosyluronic acid
Uroporphyrinogen: Decarboxylase, and, *Mauzerall and Granick*, 1141
Uterus: Enzymes, amino acid-activating, estradiol, effect, *McCorquodale and Mueller*, 31
See also Ovary

V

Vitamin A: Esterification, enzymatic, *Krinsky*, 881
Vitamin K_2: Naphthoquinone derivative, crystalline, isolation and properties, *Noll*, 919

X

Xylulokinase: D-, liver, purification and properties, *Hickman and Ashwell*, 737

Y

Yeast: Sterols, biogenesis, *Alexander, Gold, and Schwenk*, 599
Alexander and Schwenk, 611
Yeast alcohol dehydrogenase: 1,10-Phenanthroline, inhibition, instantaneous kinetics, *Hoch, Williams, and Vallee*, 453
—, —, time-dependent, kinetics, *Williams, Hoch, and Vallee*, 465

Z

Zinc: Dehydrogenases, alcohol, role, *Hoch, Williams, and Vallee*, 453
Williams, Hoch, and Vallee, 465
